

## HOSPITALS

Perioperative hospital services are becoming pure cost centers. MACRA: APM, MIPS is here and represents the first step in the evolution towards pure bundling, where cost containment is paramount.

At Acute Pain Therapies we offer a multi-disciplinary patient care program that will help postoperative surgical patients manage their pain as effectively as outpatients as when they are in the hospital. This will:

- decrease length of stay (LOS)
- reduce opioid prescribing and post-operative "nosocomial addiction"
- offload hospital-based costs of perioperative pain management
- provide better patient outcomes
- address the opioid epidemic from a unique, preventative approach

Our clinic is an outpatient specialty clinic focused on optimizing pain and functional status, and not at risk of being "bundled in."

Let us help you improve surgical outcomes and reduce costs. We invite you to visit our website to learn more about our practice.
